- **Alura** — 116h across Back-end, Front-end, DevOps and UX & Design (2022–2023)

## SKILLS

Node.js • TypeScript • NestJS • PostgreSQL • React • Astro • Cloudflare • LLM integration • AI agents • agent orchestration

## LANGUAGES

Portuguese (native) · English C1

## SUMMARY

Full Stack Software Engineer with 3+ years on a multi-tenant B2B SaaS, backend-leaning: NestJS, Node.js, TypeScript, PostgreSQL. Sole engineer accountable for production stability.

## EXPERIENCE

### Full Stack Software Engineer — Widde

São Paulo, Brazil (Hybrid) · Jan 2025 – Present

*B2B video-commerce SaaS for e-commerce brands. Sole engineer owning production reliability on a multi-tenant platform.*

- Cut recurring ticket volume from ~70 to ~40 every two weeks by categorizing failures and fixing each class at the source — test coverage, e-commerce platform update handling — rather than closing tickets faster, keeping the product team on features.
- Audited a core NestJS service against the framework's request pipeline (middleware → guards → interceptors → pipes → handler → filters), documented responsibilities that had leaked across layers, and turned the review into a template the team reuses on other modules.
- Designed and shipped Widde's website (React + Astro), then handed routine content work to marketing through an agent that implements requests against documented architecture and opens a PR with a Cloudflare preview — page updates no longer need an engineer.
- Designed and shipped the internal support agent: classifies incoming tickets, answers most from context it retrieves itself, opens a pull request when the fix is code, and parks anything with no documented flow instead of guessing.

### JavaScript Software Engineer — KTGroup Technologies

São Paulo, Brazil (Hybrid) · May 2023 – Jan 2025

*Full-time from Jul 2024; internship from May 2023. KTGroup's mission is to support companies with the process of receiving Fiscal and Accounting Documents, from start to finish*

- Maintained and extended the JavaScript logic behind a BPMS invoice-approval workflow for international clients — JSON transformation, process monitoring, and adapting existing functions to new approval rules.

### Voluntary Military Service — Brazilian Army

São Paulo, Brazil · Jan 2022 – Jan 2023

- Led small teams and handled administrative tasks; ranked 1st among 20 finalists selected for the Corporal Training Course.

## PROJECTS

### WhatsApp AI Chatbot — Meta Business API Integration

Personal project · Since Jun 2026

- Multi-tenant NestJS service on the Meta Business API: OAuth with refresh-token rotation, Stripe billing over queued webhooks, and per-tenant isolation from day one. Built to be sold as a subscription automation service.
